ONNA

ONNA T is a 4" touchscreen room controller designed to provide full control over KNX installations, offering a truly distinctive user experience.
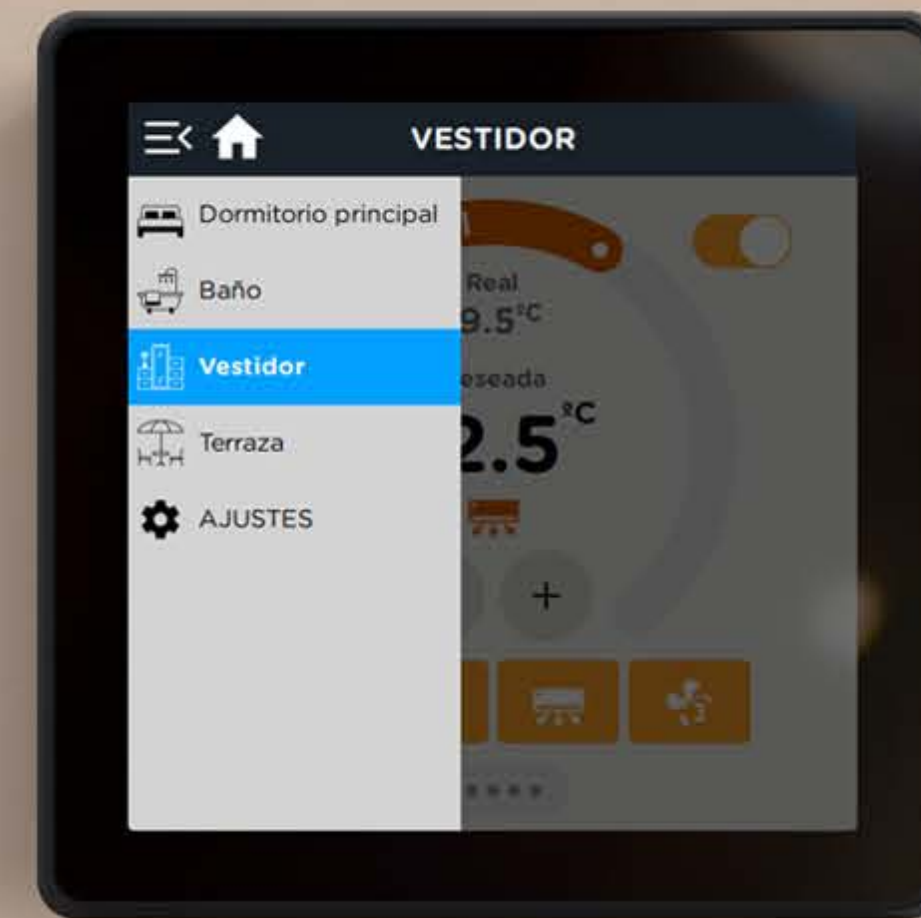

"Intuitive navigation with fluid horizontal and vertical scrolling across menus and screens."

Unlike other systems based on rigid page-by-page structures, its navigation flows through a menu and screens with horizontal and vertical scrolling.

This clean block-based layout allows information to be displayed clearly and logically, creating a more intuitive, agile, and engaging user experience.

ONNA

Direct KNX bus connection integrated into the device.

A robust and reliable architecture that ensures system operation even if the network fails.

"Dual thermostat: ideal for combined systems. Built-in temperature and humidity sensor."

It also allows navigation between four distinct zones - for example, master bedroom, walk-in closet, entrance hall, and bathroom - with all functionalities clearly organized and easily accessible.

ONNA

ONNA TCO version with built-in sensors for CO$_2$ and TVOC measurement.

An ideal solution for spaces that demand the highest standards in comfort, energy efficiency, and indoor air quality - such as schools, offices, airtight homes, healthcare centers, or buildings certified under **BREEAM** or **WELL.**
